

Assignment 1

Prompt Engineering

Task:

Enhancing Customer Service in Retail: Create a prompt asking for strategies to improve customer service in a retail environment, focusing on staff training, technology integration, and customer feedback analysis.

Prompt:

Based on your understanding of customer service in retail, share innovative strategies to improve customer service in a retail environment, emphasizing staff training, technology integration, and mapping out a systematic strategy to analyze and act upon customer feedback. Break down your recommendations into key components. Use practical examples or case studies to illustrate the feasibility and effectiveness of your proposed strategies. Finally, reflect on how your strategies address common challenges in customer service in a retail environment and how they can be improved.

Rationale:

This prompt activates prior knowledge by assuming respondents have a basic understanding of retail environments. It is goal-oriented, seeking comprehensive strategies for customer service improvement. The prompt is specific, providing clear context on staff training, technology, and feedback analysis. It encourages a structured response by breaking down each component. Including examples ensures practical relevance, and the invitation to seek clarification helps ensure accurate and context-specific responses, avoiding ambiguity.
